² Source; Wikipedia, 2017. The absence of Japanese universities in the above listings needs an explanation. Wikipedia writes: "Since 1949, there have been twenty-five Japanese (including Japanese born) winners of the Nobel Prize . . . In the 21st century, in the field of natural science, the number of Japanese winners of the Nobel Prize has been second behind the U.S." Wikipedia's listings are frequently controversial. For example, Fields Medal winner Heisuke Hironaka is "claimed by" or listed under three universities, Kyoto, Columbia and Harvard. Many are at an institution for only a year as a "visiting professor" but listed anyway. Historians interested in Karma will note the absence of universities in most nations ruled by tyrannical regimes and in the former Confederate states of the U.S. Statistically, the eleven former Confederate states with a population of 108,000,000 out of 332,000,000 should have won 90+ Nobel Prizes out of the 278 won by all 50 U.S. states. Those nine confederate states have won zero!

³ In the three sciences, Chemistry, Physics, and Physiology or Medicine.
